

WSTIMS For Windows Fix List

Status	Priority	Program Version	Component	Issue	Notes
Closed	H	4.0.0.6	Trick Entry	Skier had TB, TF, RTB, TF. The second TF is a repeat, but still got scored at 100 points. I had to manually change it to Repeat. I was able to reproduce this one and in fact duplicated it for hand tricks also.	There was an error being encountered when attempting to check for repeat tricks when the trick was one of the 4 tricks of a pass. This has been corrected.
Closed	H	4.0.0.6	Trick Entry	Entered tricks in pass 2 before entering pass 1. Would not save the score and threw an cast error for the score.	There was an error in detecting that there was a score for the second pass when there wasn't one in the first pass. Corrected this issue.
Closed	H	4.0.0.6	Trick Entry	Had to insert as the first trick a T7F before a T5B. It changed the T5B to repeat, which was fine, I just had to manually change it to Credit. However, it would not give points to the T7F.	Was not properly handling check for repeats when inserted as the first trick. Fixed this issue for all situations including the T7 T5B combination
