

WSTIMS For Windows Fix List

Status	Priority	Program Version	Component	Issue	Notes
Closed	M	5.0.0.8	Team Management	I have an option to import the skier team assignments for regionals and nationals. Right now I require the member number but adding a feature to use the name to search registrations would be very helpful. Popup a dialog if a unique value can't be determined. Similar to the trick video matching process	Created a team setup work sheet that will assign skiers to teams. It will use the MemberId if available otherwise it will attempt to match on the skier's name. The name must be in the format of "LastName, FirstName" and needs to be the name as specified in the registration. There will be an additional attempt to match on just the last name with the combination of the division and event assignment.
Closed	H	5.0.0.8	Overall Summary	Skier not entered in all 3 events is being assigned 1000 points. Also not calculating overall correctly for JW	The NOPS data table had the number of events required set to zero for JW and IW. This caused the overall calculation for these 2 divisions to be incorrect.
Closed	L	5.0.0.8	Jump Entry	5 foot ramp not being offered for JM	Not sure why but I had a check to not allow 5 foot for 6 foot jumpers but IWWF rules allow this.
Closed	H	5.0.0.8	Registration Import	Review what attributes are updated when imported registrations already exist. Probably should not update event group, run order, or skier class	When re-importing pre-registrations or from the registration template the only information that will be updated when skier registration for an event already existing will be the ranking scores and the skiers officials ratings. For an event the skier's class, event group, and run order will not be updated. Generally these are the most likely attributes to have been updated within the system therefore it creates problems if the information is over written.
Closed	H	5.0.0.8	Slalom Entry	A couple of scorers have reported that after deleting all passes that the skier still had a score	I have been unable to duplicate the issue. However I have implemented a change that I believe will eliminate the possibility of this happening in the future.
Closed	H	5.0.0.8	Records	Updated records for AWSA, IWWF, and NCWSA	Updated
