

## WSTIMS For Windows

### Fix List

Status	Priority	Program Version	Component	Issue	Notes
Closed	H	5.0.1.9	Slalom Entry	I have seen a couple of examples of a skier showing 2 results in a single round on the slalom entry window. In one case I analyzed the database and found 2 entries in the SlalomScore table for the same skier, division, and round. That shouldn't be possible but I think it might be a result of not using the PK identifier.	Unsure of the actual root cause but I have change the handling on the score records to use the primary key attributes rather than the PK identifier.
Closed	H	5.0.1.9	Team Management	Program is throwing an exception when using the import team button and cancel is clicked when selecting a file
